VOLUMETRIC PISTON FILLING MACHINE

Piston filling machine- ACO1P250/700 for 15-250ml & 50-700ml

Price: 850 GBP

For accurate dosing of products by volume into any type of container. This style filling machine can handle most types of product from liquid to paste and also products containing particulates such as chutney and jam

Technical data

Capacity per hour: 700 units

Voltage: 220V

Power: 0.6 kW

Dimensions:

Height: 120 cm

Width: 80 cm

Length: 100 cm

Filling machine table- T1000

Price: 650 EURO

T1000 is a rotating table for semiautomatic jar filling. It can use jars, cans or glass bottles with diameter range from 45 to 95 mm (wider on request). It is a handy solution for small and middle scale production.

Maximum capacity is 700 units per hour. If attached filling machine DKL it is 700 500g units and if DKL2 is used, it turns out 700 1kg units per hour.

The jar has to be placed manually, the table rotates and positions the jar in the filling position, filling is activated by the jar, and full jar goes to tables exit area. Optical, magnetic and mechanical sensors and Siemens microcontroller makes the machine operating fast, precise and reliable.

Technical data

Capacity per hour: 700 units
Voltage: 220V or 110V on request
Power: 0.2 kW
Dimensions:
Height: 75 cm
Width: 100 cm
Length: 140 cm

Labeling machine- EPK **Price: 1350 EURO**

Semiautomatic labeling machine for use with cylindrical containers (bottles, jars, cans..) diameter from 20 mm up to 150 mm (wider on special request). The machine is handy solution for small and medium scale production.

Maximum capacity is 700 labels per hour.

The container has to be placed into the machine and with one press to the button (foot switch) the label will be attached to the container. Photocell label sensor enables precise label positioning and rotating cylinders system sticks label perfectly to the container surface. It is possible to upgrade the machine with optional date coder and counter with printing device.

Technical data

Capacity (labels/hour): 700 max.

Voltage: 220V or 110V on request

Power: 0.3 kW

Label:

- length 8-250 mm

- width 8-140 mm

Stepper motor speed 1 - 30 m/min

Dimensions (h x l x w) cm: 100 x 60 x 56 cm

VIBRATING KNIFE FOR BREAKING CRISTALS IN CRISTALLIZED HONEY

Price: 950 EURO

Can operate in tanks with up to 45 cm diameter (100 Kg)

Through the rotation of the vibrating knife, actioned by a 750W, 230V motor with approx. 25 rpm, the crystallized, very hard honey can be liquefied without heating and poured in 300 Kg barrels or in honey processing tanks

STEAM MELTER

Manufactured in stainless steel

Price: 1600 EURO

Dimensions: Ø 70 cm, height 63 cm

Capacity: approx. 20 Dadant frames or 25 Langstroth frames or 30 half size Dadant frames per cycle. The duration of a cycle is approx. 25-30 minutes.

The steam is produced in a separate tank with 19 Liters capacity (enough for approx. 2 hours of functioning)

Equipped with electric resistance of 2800W

It is provided with a sieve with Ø3mm holes for retaining the marc and also with a device for periodic pressing the marc for increasing the extraction efficiency
