

THANK YOU FOR TAKING  
**SHARK FIN**  
OFF THE MENU

**“Do you vow to protect our oceans so that our children and grandchildren can continue to enjoy its treasures in abundance?”**

**“I do.”**

Each year, up to 73 million sharks are taken from the oceans to satisfy our enormous demand for shark fin and other shark products. As a result, more and more shark species are being threatened.

As top predators in the food chain, sharks are important in helping to control the populations of other fishes. If they become extinct, we are in danger of losing our source of food from the oceans.

Save our sharks. Save our oceans. For more information, visit [wwf.sg](http://wwf.sg).
